

Part - A

- Answer all questions on this paper itself.
- Indicate the relevant steps and the correct units when answering the questions.
- Marks are awarded as follows. In part A, 02 marks for each question and in part B, 10 marks for each question.
- 01. The annual assessed value of a house is Rs. **60 000.** If the provincial council charges annual rate amount of Rs. **4 500**, then find the annual rate percentage.
- 02. The figure represents a square lamina. If the shape of a sector is cut out, Find the perimeter of the remaining figure.

03. Solve.
$$\frac{2}{3x} - \frac{1}{6x} = \frac{1}{10}$$

04. Find the value of x^0

05. Solve (x+3)(x-8)=0

06. Select two congruent triangles from the given below and write the relevant case of congruency.

07. Fill in the blanks in the following by using suitable terms

In a rhombus are equal and its diagonals are bisected each other.

08. Shade the region of $\mathbf{A} \cap \mathbf{B}'$ in the given Venn diagram.

09. In between which whole numbers does the value of $\sqrt{57}$ lie?

- (i) 49 and 64
- (ii) 50 and 60
- (iii) 7 and 8

10. Except the triangular faces in the given prism, the area of the remaining faces are **348cm**². Find the length of this prism

11. If 3x - y = 7 and 5x + 9y = 25, then find the value of x + y without solving the equations.

12. The gradient of a straight line is 3 when passing through the point (0,4). Write the equation of that line as y = mx + c

Find the value of the x according to the data of the circle with 15. center "O".

51-60, 61-70 and 71-80 are few class intervals in a frequency distribution. Write down the 16. lower boundary and the upper boundary of the interval of 61-70.

(i) Lower boundary (ii) Upper boundary

Find the probability of a male get down in the next bus halt from a bus with 7 males and 6 females. 17.

If $\log_2 a = 5$, find the value of a. 18.

19. The curved surface area of a cylinder is 336cm² and the base circumference is 42cm. Find the height of the cylinder.

20. Length of the chord **AB** is **24cm** in the given circle with centre **O**.

If **OX=9cm**, find the radius of the circle.

21. Mr. Sampath travelled **14km** within **15 minutes** by his motorcycle. Find his speed in kilometers per hour.

22. AB is a vertical building of **25m** height. An observer observed a car on the horizontal ground from the roof top of the building (B) with a depression angle of 42°. Represent this information in the given figure.

23. **ABCD** and **CDEF** are two parallelograms. If the area of the triangle **ABC** is **12.5cm**², find the area of **CDEF**.

24. **AB** is a locus, which is equidistant from the point **O**.

By using the knowledge of loci and constructions, sketch the point **P** on **AB** as equidistant from **AO** and **BO**.

25. Find the value of x and y.

Part - B

- (01) (a) There are $\frac{2}{7}$ of m.c.q type questions in a certain model papers book. From the remaining questions $\frac{3}{4}$ are structured type questions. And all the remaining questions are essay type questions.
 - (i) Find what fraction of the whole questions are not belong to m.c.q type questions.
 - (ii) Find what fraction of the whole questions are structured type questions.
 - (iii) Write down the ratio between the essay type questions and the structured type questions in the simplest form.
 - (b) It has been estimated that 6 men will require 8 days to trim a land. If two men left due to sick after they had worked for two days, in how many more days can this task to be completed by the remaining men.

- (02) The figure shows a metal sheet consisting of a **PQRS** trapezium and a semicircle with **QR** as it's diameter.
 - (i) If the perimeter of **PQRS** trapezium is **66cm**, then find the length of **PS**.

	(ii)	Find the perimeter of whole figure with the semicircle.
	(iii)	Find the area of the semicircular portion.
	(iv)	If another trapezium shape metal sheet is used as its area equal to four times of the area of the semicircular portion and the length of QR and SR are not changed. Then find its PQ length.
(03)	(a)	Mr. Jayakodi imported an electrical item with the value of Rs. 40 000 and Rs. 16 000 he has to pay as its duty. (i) Find the duty percentage that Mr. Jayakodi has to pay.
		(ii) Mr.Jayakodi decided to mark the price of that item as get a profit of 20% from the value of the item after paying its duty. Find out the selling price of that electrical item.
	(b)	An investor invested Rs. 60 000 in a certain company. Market price of a share is Rs. 25 in that company and dividends of Rs. 4 per share is paid annually
		(i) How many shares did he buy?
		(ii) How much dividends income does he obtain at the end of a year?

- (04) (a) A bag contains identical 3 red balls and 2 blue balls. Tharindu takes out a ball randomly and marks its colour and put it back to the same bag.
 - (i) A portion of a tree diagram drawn to indicate the probabilities of a ball is taken by Tharindu at random from the bag being a red or blue. Complete the given tree diagram.

Blue

- (ii) After Tharindu, Kavindu takes a ball randomly from this bag. Extend the above tree diagram to show the events of getting a red or blue ball by Kavindu.
- (iii) Find the probability of getting different colour balls by both of Tarindu and Kavindu.

- (b) (i) According to the above event of getting a ball by both of Tarindu and Kavindu, mark the elements of the sample space on the given grid.
 - (ii) Encircle the event of both getting same colour balls and find its probability.

(05) A teacher is uploaded a video of his lesson to his YouTube channel at 3 p.m.The below given incomplete frequency distribution and corresponding incomplete histogram have been represented the number of viewers who watched that video in the same day when at 10 p.m.

Time (class intervals)	3 - 5	5 - 6	6 - 7	7 - 10
No. of viewers	•••••	••••••	16	24

- (i) Complete the above frequency table by considering the histogram.
- (ii) Complete the below histogram by considering the frequency table.

- (iii) Draw the frequency polygon by using the histogram.
- (iv) To get a mean number of viewers as 9 who watched this video within one hour, further how many number of viewers have to watch this video?

දෙවන වාර පරීක්ෂණය - 11 ශුේණිය - **2023** Second Term Test - Grade 11 - 2023

Mathematics - II

Time: 3 hours

Name / Index No.

- Answer 10 questions selecting five questions from part A and five questions from part B.
- Each question carries 10 marks.
- The volume of a right circular cylinder with base radius r and height h is π r² h and volume of a cone with base radius r and height h is $\frac{1}{3}$ π r² h

Part - A

(01) The following leaflet was pasted on a refrigerator at a certain trade center.

Th	The selling price of the refrigerator - Rs. 120 000				
When outright purchasing 10% discount is given.	First make a down payment of Rs. 20 000 and the remaining amount can be paid in 20 equal monthly installments at 24%				
	annual interest rate. The interest is calculated in the method of reducing balance.				

Show that, if this refrigerator is purchased on an installment plan rather than an outright purchase, an additional amount of Rs. 33 000 will be payable.

(02) An incomplete table of the x values and the y values prepared to draw the graph of the function $\mathbf{v} = 4\mathbf{x} - \mathbf{x}^2$ is given below.

х	-1	0	1	2	3	4	5
У	-5	0	3		3	0	-5

- (a) (i) Find the value of y when x = 2
 - (ii) Draw the graph of the function using a suitable scale.
- (b) Using the graph,
 - (i) Write the equation of the axis of symmetry
 - (ii) Find the roots of the equation $4x x^2 = 0$
 - (iii) When the above graph moves downward along the y axis by 1 unit, the function can be expressed in the form $y = b (x a)^2$. Write the values of a and b.

- (03) (a) Solve. $\frac{2x-1}{3} = \frac{x+1}{3} + \frac{4}{3}$
 - (b) The price of 2 watches of the same type and a pair of sunglasses is Rs. 2 700 and the price of a pair of sunglasses is the same after a 30% discount is given on the marked price of the watch.
 - (i) By taking the price of a watch as x rupees and the price of a pair of sunglasses as y rupees, construct a pair of simultaneous equations.
 - (ii) By solving them, find separately the price of a watch the price of a pair of sunglasses.
- (04) (i) Candidates who have applied for recruitment in a particular vocational training institute can either visit the institute or attend the interview through zoom technology. From the morning of the interview day within "t" period of time, the number of people who joined the interview through zoom technology is indicated by $2t^2 + 3t + 10$ and the number of people who came to the institute and participated for the interview is indicated by $t^2 + 2t + 3$. If there are 10 people who joined the interview through zoom technology more than the number of candidates who came to the institute and participated for the interview, show that $t^2 + t 3 = 0$.
 - (ii) By taking the value of $\sqrt{13}$ as 3.6, solve the above equation using the formula or by some other method. Then, show that the duration of the interview is 1 hour and 18 minutes.
- (05) An observer in a boat moored at a point **P** in the sea, sees the top **B** of a lighthouse **AB** with the height of **100** m, at an angle of elevation of **30**°. The boat travels at a speed of **20** m per minute along a rectilinear path towards the lighthouse in **4 minutes** and stops at the point **Q**.
 - (i) Find the distance of **PQ**.
 - (ii) Draw a scale diagram including the above informations, using the scale 1:2000
 - (iii) Using the scale diagram, find the angle of depression of the boat at **Q** when observed from the top **B** of the lighthouse.
- (06) The following table shows the information about the number of customers who visited the cash deposit and withdrawal machine placed infront of a certain financial institution and withdrew money during a period of one hour. (5 10 means greater than or equal 5 and less than 10. All the class intervals are in multiples of Rs. 1 000)

The amount withdrawn (in multiple of 1000)	5 - 10	10 - 15	15 - 20	20 - 25	25 - 30	30 - 35	35 - 40
Number of customers	2	3	8	12	7	5	3

- (i) Write the modal class.
- (ii) By taking the mid value of the modal class as the assumed mean, find the mean amount of money withdrawn by a customer in an hour.
- (iii) Express the number of customers who withdrew more than Rs. 25 000, as a percentage of the total number of customers.

- (07) (a) A machine that automatically accelerates and operates produces rubber balls. This machine automatically stops every fifteen minutes and restarts after five minutes. The machine produces 4 rubber balls in the first minute and every minute there after produces 3 rubber balls more than the previous minute.
 - (i) Write the number of rubber balls produced in the first 4 minutes respectively and state which type of progression is it.
 - (ii) Find the number of rubber balls produced in the 15th minute.
 - (iii) Show that the number of rubber balls produced by this machine in 15 minutes exceeds 370.
 - (b) In the geometric progression 3, 6, 12, 24, find the sum of the first 8th terms, using the formula.
- (08) Use only a straight edge with a cm / mm scale and a pair of compasses for the following geometric constructions. show the construction lines clearly
 - (i) Construct the triangle ABC, such that AB = 7 cm, $BAC = 90^{\circ}$ and AC = 6 cm
 - (ii) Construct the locus of points equidistance from **A** and **C**, and name the intersection point of that locus and the side **BC** as **O**. Then construct the circle taking **O** as the center and **OA** as the radius.
 - (iii) Construct a line parallel to AB through C and name the point it meets the circle as D.
 - (iv) Give reasons why **BD** // **AC**.
- (09) The following figure shows a right circular conical shaped vessel rested on a support with the circular opening radius "a" and height of twice of its radius and a solid circular cylinderical vessel with the radius "r" and height 2r. If the conical shaped vessel is completely filled with water and the same volume of water is poured in to the cylinderical vessel, it is filled to half of it's height. Show that $a = \sqrt[3]{\frac{3}{2}} \mathbf{r}$ and using the logarithms table, find the value of "a" to the nearest first decimal place when r = 3. 25 cm.

- In the triangle **PQR**, **S** is the mid point of the side **PQ**. **T** is a point on the side **PR** such that $\mathbf{RT} = \frac{1}{3} \mathbf{PR}$. The line drawn parallel to **QT** through **S**, meets the side **PR** at **U**. The straight lines **SR** and **QT** meet at **O**. show that $\mathbf{OT} = \frac{1}{4} \mathbf{QT}$.
- (11) In the circle with the center **O** shown in the figure, **E** is the mid point of the chord **AB**. The produced line **EO** meets the side **AC** at **F**. Furthermore, produced line **CO** meets the circle at **D**.
 - (i) Giving reasons, find the magnitude of \mathbf{AEF}
 - (ii) Show that $\overrightarrow{AFE} = \overrightarrow{BCD}$
 - (iii) Prove that AB : CO = BD : AF

(12) Mr. Nirmal who came for a book fair, bought 15 translated books, 13 novels and additionally 7 other books. The total number of books he bought was 30.

- (i) Copy the given diagram and represent the above information in it.
- (ii) How many translated novels did Mr. Nirmal buy?
- (iii) Find the number of non translated novels bought by Mr. Nirmal
- (iv) In the venn diagram you copied, shade the region that represents the translated books which are not novels.
- (v) Find the probability that the book chosen at random is a novel or a translated book, among the books he bought.
