පැය දෙකුයි இரண்டு மணித்தியாலம் Two hours

Instructions:

- * Answer all the questions.
- * Write your Index Number in the space provided in the answer sheet.
- * Instructions are given on the back of the answer sheet. Follow them carefully.
- * In each of the questions 1 to 50, pick one of the alternatives from (1), (2), (3), (4), (5) which is correct or most appropriate and mark your response on the answer sheet with a cross (x) in accordance with the instructions given at the back of the answer sheet.
- * Non programmable calculators are allowed to use.
- 1. The type of nursery bed suitable for the rainy season is,
 - (1) flat bed.

- (2) raised bed.
- (3) furrow type bed.
- (4) sunken bed.
- (5) thatched roofed bed.
- 2. Goldfish is,
 - (1) an ovoviviparous.
- (2) an egg scatterer.
- (3) an egg depositor.
- (4) a mouth brooder.
- (5) a bubble nest builder.
- 3. The group of fungi which is responsible for the production of aflatoxin in food items is
 - (1) Mucor.
- (2) Fusarium.
- (3) Aspergillus. (4) Salmonella. (5) Penicillium.

- 4. In food packages, a silica gel sachet is used to control,
 - (1) oxygen.

(2) ethylene.

(3) moisture.

(4) discoloration of food.

- (5) carbon dioxide.
- 5. Head rice recovery in parboiled paddy milling compared to raw paddy milling is,
 - (1) low.

(2) high.

(3) same.

(4) sometimes low.

- (5) sometimes high.
- 6. An example for a semi-permanent, fully protected plant house is a
 - (1) net house.

(2) polytunnel.

(3) green house.

(4) rain shelter.

- (5) thatched house.
- 7. In a certrifugal pump the liquid enters and leaves the pump from the,
 - (1) side and top, respectively.
- (2) center and top, respectively.
- (3) top and center, respectively.
- (4) bottom and center, respectively.
- (5) center and bottom, respectively.

is,

(1) sub soiler.

(3) light iron plough.

(5) Japanese reversible plough.

- (
	8. Gea is 1 (1) (3) (5)	seeds. suckers.	(2)	as a decorative garden plant or as cut flowers. Gerbera tubers. leaf cuttings.
	(1) (3)	e of the main advantages of solar parare cheap. need little space. do not need rechargeable batteries.	(2) (4)	is they are efficient. produce clean energy.
1	араі (1)	municipal solid waste management rtment complex is, burning. disposal.	(2)	he best practice to implement by the residents in an storage.
1	(5) 1. The	source reduction. main crop cultivated in Alluvial	and	<u>-</u>
		rice. (2) taro.		manioc. (4) maize. (5) cowpea.
12		lic potable water supply should be		
	(3)	pH. harmful becteria. electrical conductivity.		chloride. total dissolved solids.
13	(3)	most suitable propagation method grafting. layering. micro-propagation.	(2)	obtain disease free planting material is, budding. stem cuttings.
14	. In po	oultry industry, obtaining clean eg	gs is	important. The most suitable rearing method to obtain
	(1) (3)	deep litter system. slatted floor system. semi-intensive system.		free range system. battery cage system.
15	(1) (3)	e broiler meat production process, a scald the carcass. defeather the carcass. remove the pin-feathers.	gas t (2) (4)	disinfect the carcass.
• 16	Use to The apply (1) in (2) in (3) in (4) if	the following diagram to answer of sprayer shown in the this diagram of pesticides to, rice fields. maize fields. Indoor plants. Fruit trees in a home garden. wegetables and flower plants in a	ı is	more suitable to
17.	The r	nost appropriate primary land prep	parat	ion implement for a hard soil with rocks and stubbles

(2) disk plough.

(4) moldboard plough.

[See page three

18.	If an	electrical	bulb	draws	10 .	A current	when	connected	to	a	230	V	wall	outlet,	the	resistance	of
	bulb	should be	÷,														

(1) 0.043Ω .

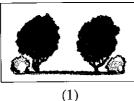

(2) 0.43Ω .

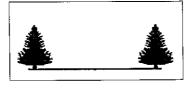

(3) 4.3Ω .

(4) 23 Ω .

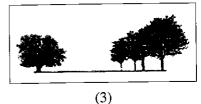

(5) 2300 Ω .

19. Balance is one of the main concepts used in landscape designing to ensure relaxing and free flowing. The asymmetrical balance in a landscape design is correctly shown in,

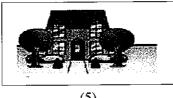

(2)

(4)

(5)

20. In the cut flower industry, petioles are treated with chemicals to extend their shelf-life. In this process, Silver Nitrate (AgNO₃) is mainly used,

(1) to maintain pH.

(2) as an antioxidant.

(3) to destroy microbes.

- (4) as a bleaching agent.
- (5) to reduce ethylene production.
- 21. Cleaner production is a,
 - (1) profit maximization strategy.
 - (2) passive environmental strategy.
 - (3) reactive environmental strategy.
 - (4) proactive environmental strategy.
 - (5) labour intensive production strategy.
- Measurement of the height of a tree is given in the diagram below. Use this diagram to answer question 22.
- 22. The height of the tree should be
 - (1) 48 m.

(2) 49 m.

(3) 50 m.

(4) 52 m.

(5) 54 m.

- 2 m 50 m
- 23. Smaller contour intervals are used to draw a contour map when
 - (1) clearing a virgin forest.
 - (2) cut and filling is required.
 - (3) the land is more or less flat.
 - (4) the land has a uniform slope.
 - (5) the time available to draw the map is shorter.
- 24. Water pollution has become a major problem in the world today. Some of the most common sources of water pollution in Sri Lanka are,
 - (1) animal bathing, use of agrochemicals and oil spills.
 - (2) oil spills, discharge of municipal sewage and marine dumpling.
 - (3) human bathing, animal bathing and marine dumping.
 - (4) discharge of municipal sewage, use of agrochemicals and industrial discharge.
 - (5) discharge of municipal sewage, human bathing and industrial discharge.

- 25. Rancidity of fats in lipid rich foods takes place mainly due to,
 - (1) oxidation of fatty acids.
 - (2) reduction of fatty acids.
 - (3) degradation of fatty acids.
 - (4) hydrogenation of unsaturated fatty acids.
 - (5) dehydrogenation of saturated fatty acids.
- 26. Pasteurized foods,
 - (1) can be stored in the room temperature.
 - (2) can be stored in an air-conditioned room.
 - (3) should be stored in a refrigerator below 10°C.
 - (4) should be stored in a deep freezer below -5°C.
 - (5) should be stored without exposing to direct sunlight.
- 27. In a supermarket, after washing fruits, inedible and unwanted parts were removed, sliced or chopped, antioxidants were added, packed in a styrofoam tray and covered with transparent flexible film. This process can be best explained as,
 - (1) sorting.

(2) grading.

(3) enrichment.

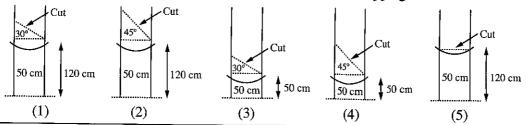

(4) fortification.

- (5) minimal processing.
- 28. In a hydroponic system, hydroponic media need to be changed frequently mainly because,
 - (1) pH and EC of the solution change rapidly.
 - (2) nutrients in the solution become insoluble.
 - (3) nutrient content in the solution decreases rapidly.
 - (4) discoloration of the solution takes place due to oxidation.
 - (5) concentration in the solution increases due to evapotranspiration.
- 29. In a power transmission system of a tractor, the clutch is mainly used to,
 - (1) increase the power/ torque at axle shaft.
 - (2) change the speed, engine power or moving direction.
 - (3) turn the power coming from the gear box, by a 90° angle.
 - (4) connect the power take-off shaft to the engine at the time of start.
 - (5) disconnect the engine power with the rest of the power transmission system.
- 30. The major function of the cam shaft of an internal combustion engine is to,
 - (1) pressurize the air fuel mixture.
 - (2) transmit the power to the crank shaft.
 - (3) operate the intake and exhaust valves.
 - (4) keep the engine running during idle running.
 - (5) receive the power from the piston through the connecting rod.
- 31. A person who visited a timber store, found a highly durable timber having the highest density among the timbers found in that timber store. He also found that the heartwood of this timber is cream-coloured to golden yellow. Timber dealer told him that it will gradually turn to brown with age. Based on the above description, this timber can be best identified as,
 - (1) Jak.

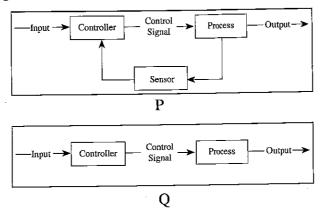

(2) Teak.

(3) Ebony.

- (4) Arjuna (Kumbuk).
- (5) Satinwood (Burutha).
- 32. The line drawing showing the correct method of rubber tree tapping for latex extraction would be,

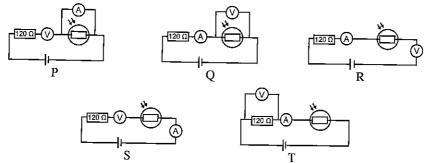

- 33. Activated carbon can be produced by burning of coconut shells,
 - (1) under low oxygen and low temperature.
 - (2) under high oxygen and low temperature.
 - (3) under low oxygen and high temperature.
 - (4) under high oxygen and high temperature.
 - (5) in open air without temperature control.
- 34. A good sensor in an electronic circuit should be,
 - (1) highly sensitive to the measured property and insensitive to other application properties.
 - (2) insensitive and show zero influence to the measured property.
 - (3) insensitive to the measured property and highly sensitive to other application properties.
 - (4) highly sensitive to the measured property and less sensitive to other application properties.
 - (5) less sensitive and show zero influence to the measured property.
- Use the following diagrams to answer question 35.

- 35. Of above diagrams,
 - (1) both P and Q are not control systems.
 - (2) both P and Q are open loop control systems.
 - (3) both P and Q are close loop control systems.
 - (4) P is a close loop control system and Q is an open loop control system.
 - (5) P is an open loop control system and Q is a close loop control system.
- 36. During the tea manufacturing process, the main objective of withering of tea leaves is to,
 - (1) improve the oxidation process.
 - (2) inactivate the enzyme reactions.
 - (3) improve the flavour of the made tea.
 - (4) improve the colour of the made tea.
 - (5) reduce the moisture content of the tea leaves.
- 37. Before measuring resistance, as an initial setting,
 - (1) a multimeter should be short circuited and adjusted till the meter reads zero resistance.
 - (2) a multimeter should be open circuited and adjusted till the meter displays full scale current.
 - (3) test leads of the multimeter should be disconnected from the circuit and adjusted till the meter reads zero resistance.
 - (4) red test lead of the multimeter should be connected to the circuit while black test lead remains unconnected and adjusted till the meter reads zero resistance.
 - (5) black test lead of the multimeter should be connected to the circuit while red test lead remains unconnected and adjusted till the meter reads zero resistance.

- 38. Breadboard is,
 - (1) used to design or test electronic circuits.
 - (2) used as a temporary binary storage area.
 - (3) mainly used to solder the components of a circuit.
 - (4) extremely reliable and circuits made on breadboards will last for years.
 - (5) used in mass production of identical circuits easily and cost effectively.
- A teacher asked her students to draw a circuit diagram to measure the voltage and current across a light-dependent resistor (LDR) connected in series with a 120Ω resistor and a battery. Circuit diagrams drawn by 5 students are shown in the following diagrams. Use these diagrams to answer question 39.

- 39. Of the above diagrams, the correct circuit diagram to measure the voltage and current across the LDR would be,
 - (1) P.
- (2) O.
- (3) R.
- (4) S.
- (5) T.
- 40. Following are three statements on stand alone wind turbines used to generate electricity.
 - A Generated electricity is stored in batteries.
 - B The electricity stored in these batteries is released only as an alternating current.
 - C Overcharging can damage these batteries.

Of the above, the correct statement/s would be,

(1) A only.

(2) A and B only.

(3) A and C only.

- (4) B and C only.
- (5) All A, B and C.
- 41. An entrepreneur decided to conduct a market survey on consumption of yoghurt before commencing a yoghurt making factory in a particular area. During his market survey he collected both primary and secondary data. An example for the source of his secondary data would be,
 - (1) collecting information through a questionnaire.
 - (2) meeting customers and discussing individually.
 - (3) referring research articles on yoghurt consumption.
 - (4) observing the behaviour of customers through CCTV cameras.
 - (5) conducting video conferences through Mobile Apps.
- 42. Following are three statements regarding weather and climate.
 - A Weather refers to short term atmospheric conditions.
 - B Climate is the weather of a specific region averaged over a long period of time.
 - C Both weather and climate include the same atmospheric elements.

Of the above, the correct statement/s would be,

(1) A only.

(2) A and B only.

(3) A and C only,

- (4) B and C only.
- (5) All A, B and C.

- 43. A student made following observations on the soil in his school garden.
 - Pooling and puddling of water on the surface during the rainy season.
 - Stunted growth of plants.
 - Shallow rooting of trees.
 - Too hard to drive a shovel into the soil.

This soil can be best explained as,

(1) a sandy soil.

(2) a loamy soil.

(3) a porous soil.

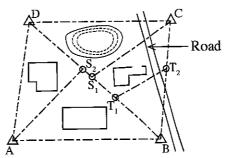

- (4) a compacted soil.
- (5) an ill-drained soil.
- Some symbols used in maps are given in the following diagram. Use this diagram to answer question 44.

- 44. The symbols P, Q and R in the above diagram represent,
 - (1) bridge, railway line and marsh, respectively.
 - (2) bridge, footpath and paddy field, respectively.
 - (3) aquifer, railway line and marsh, respectively.
 - (4) bridge, railway line and paddy field, respectively.
 - (5) aqueduct, footpath and paddy field, respectively.
- 45. Following are two statements on pumping of water from a confined aquifer.
 - A Water yield decreases when recharge rate is lower than the pumping rate.
 - B Continuous water pumping can be obtained by installing the pump at a lower place in the groundwater well.

Of the above statements,

- (1) both A and B are correct.
- (2) A is correct but B is incorrect.
- (3) B is correct but A is incorrect.
- (4) A and B are correct and B further explains A.
- (5) A and B are correct and A further explains B.
- Chain surveying map of a land is shown in the following diagram. Use this diagram to answer the question 46.

- 46. The main survey lines in the above chain surveying map are,
 - (1) AS_2 , CS_1 and T_1T_2 .
 - (2) AB, AD, BD and CD.
 - (3) AB, AD, BC and CD.
 - (4) AB, BC, BD and AD.
 - (5) AD, BD, BC and CD.

- 47. Following the proper procedure in feeding the food fish reared in a pond is important. A feed amount equal to
 - (1) 5% of the body weight should be spread on the surface of the pond everyday.
 - (2) 10% of the body weight should be spread on the surface of the pond everyday.
 - (3) 5% of the body weight should be provided to the same place in the pond everyday.
 - (4) 10% of the body weight should be provided to the same place in the pond everyday.
 - (5) 7.5% of the body weight should be provided to several places in the pond everyday.
- 48. Following are three statements regarding cow milk production.
 - A Somatic cell count in milk is an indicator of udder health.
 - B Clotting of milk during boiling can be due to bacterial contamination.
 - C Udder infection reduces the somatic cell count in milk.

Of the above,

- (1) A and B are correct.
- (2) A and C are correct.
- (3) B and C are correct.
- (4) A and B are correct and B explains A.
- (5) A and C are correct and C explains A.
- 49. Few steps recommended by the Sri Lankan health authorities to cope with the COVID-19 pandemic are as follows.
 - A Wearing face masks
 - B Adopting work rosters with minimum number of workers
 - C Covering counters with polythene shields
 - D Introducing robotic devices to perform high risk tasks

According to the hazard prevention hierarchy, the above A, B, C and D steps can be categorized as,

- (1) an engineering control, substitution, elimination and administrative control, respectively.
- (2) use of personal protective equipment, substitution, elimination and engineering control, respectively.
- (3) elimination, substitution, use of personal protective equipment and engineering control, respectively.
- (4) substitution, administrative control, engineering control and use of personal protective equipment, respectively.
- (5) use of personal protective equipment, administrative control, engineering control and substitution, respectively.
- 50. Following are three statements about the drip irrigation system.
 - A The difference of discharge rate between the first and last dripper along a lateral should be limited to 10%.
 - B On-line drippers are commonly used for crops with close spacing (vegetables).
 - C Among all methods of irrigation, drip irrigation performs the highest water application uniformly.

Of the above, the correct statement/s would be,

(1) A only.

(2) B only.

(3) C only.

(4) A and B only.

(5) A and C only.

පැය තුනයි மூன்று மணித்தியாலம் **Three hours** අමතර කියවීම් කාලය - මිනික්තු 10 යි _{மேலதிக வாசிப்பு நேரம்} - 10 நிமிடங்கள் **Additional Reading Time** - **10 minutes**

Use additional reading time to go through the question paper, select the questions you will answer and decide which of them you will prioritise.

Index	No.	:	 •

Instructions:

- * This question paper comprises of two parts, Part A and Part B. The time allotted for both parts is three hours.
- * Use of non-programmable calculators is allowed.

PART A — Structured Essay: (pages 2 - 8)

- * Answer all four questions on this paper itself.
- * Write your answers in the space provided for each question. Note that the space provided is sufficient for your answers and that extensive answers are not expected.

PART B - Essay: (pages 9)

- * Answer four questions only. Use the papers supplied for this purpose. At the end of the time allotted for this paper, tie the two parts together so that Part A is on top of Part B before handing them over to the Supervisor.
- * You are permitted to remove only Part B of the question paper from the Examination Hall.

For Examiner's Use Only

ජෙවපද්ධති තාක්ෂණවේදය II உயிர்முறைமைகள் தொழினுட்பவியல் II Biosystems Technology II

2021(2022)

Part B - Essay

General Certificate of Education (Adv. Level) Examination,

Instructions:

- * Answer four questions only.
- * Each question carries 100 marks.
- * Give clearly labelled diagrams where necessary.
- * Use of non-programmable calculators is allowed.
- 5. (a) Describe the basic steps in landscape designing.
 - (b) Explain the importance of the use of renewable energy and its benefits to the biosystems.
 - (c) Describe the procedure of producing Rubber products using dip-moulds.
- **6.** (a) Describe the changes that should take place in transforming labour intensive livestock production into technology driven livestock production.
 - (b) Explain the importance of soils for biosystems.
 - (c) Describe the calibration procedure of a manual knapsack sprayer.
- 7.(a) Explain the impact of water pollution on aquatic ecosystems.
 - (b) Describe the important steps of breeding neon tetra fish in an aquarium.
 - (c) Describe the role of sensor, processor and actuator in a control system.
- **8**.(a) With suitable examples, explain the enrichment and fortification processes practiced in food processing.
 - (b) Describe the importance of automation for biosystems.
 - (c) Describe the factors to be considered when selecting a scale for a survey plan.
- **9**.(a) Name the different methods of sterilization of potting media used for nursery plants and describe the procedure adopted for one of the above method.
 - (b) Describe the main types of freezing of foods.
 - (c) Describe the impact of management on the success of an enterprise.
- 10.(a) Describe the basic layout of a typical drip irrigation system showing its main components.
 - (b) Describe the main steps of making soap using essential oil.
 - (c) Describe the major advantages of growing crops in a protected house, compared to the growing in open fields.
